SUMMARY

B.Tech Artificial Intelligence & Data Science graduate (CGPA 8.07) with hands on software engineering experience through Google Summer of Code, a DBpedia Extraction Framework internship, and AI coding agent task development with Handshake AI. Experienced in debugging, implementing, and testing data pipelines and full stack applications in Java and C, including debugging within a Scala based open source codebase. Comfortable working across REST APIs, Git based workflows, and CI/CD pipelines, with a track record of shipping fixes into a live production codebase.

TECHNICAL SKILLS

Languages: SQL, Java, C
Software Engineering: Debugging, Unit & Regression Testing, Version Control (Git), Code Review, Issue Tracking, Agile Collaboration
Data Engineering: ETL Pipeline Development, Data Extraction Frameworks, Data Cleaning & Validation, Data Pipeline Debugging, REST APIs
Web & Backend: Flask, REST API Development
Tools & Cloud: Git, GitHub, GitHub Actions (CI/CD), Postman, Google Cloud APIs, Vercel, Render
Currently Learning: Advanced SQL

EXPERIENCE

Google Summer of Code 2025 Contributor | DBpedia, Remote *May 2025 to Sep 2025*

- Debugged and fixed coordinate sign errors in the DBpedia Extraction Framework (Scala), correcting geolocation data for 10,000+ Wikipedia sourced entries.
- Designed and implemented a configurable extractor list, enabling targeted extraction and reducing processing overhead by approximately 40%.
- Collaborated with international maintainers via GitHub and Slack in an iterative, milestone driven workflow, delivering every milestone on schedule.

DBpedia Extraction Framework Intern | DBpedia Association, Remote *Sep 2025 to Dec 2025*

- Diagnosed and fixed date and calendar mapping defects in the Wikipedia/Wikidata extraction pipeline, improving correctness of temporal data.
- Enabled Wikidata extraction from the GUI and implemented a selectable extractor list, reducing manual configuration effort for contributors.

Project Dynamo Contributor | Handshake AI, Remote *Jul 2026 to Present*

- Build and evaluate repository level software engineering tasks for AI coding agents, covering realistic debugging, implementation, and reasoning challenges.
- Author task instructions, reference solutions, test suites, and fixtures, and validate that evaluations stay deterministic, reproducible, and resistant to superficial fixes.

PROJECTS

CinePix | *React.js, Tailwind CSS, REST APIs*

github.com/haniyakonain/cinepix | *cinepix-five.vercel.app*

- Built and deployed a full stack movie platform with real time showtimes and ticket booking via REST APIs, live on Vercel.

EcoAyur | *Python, Flask, React.js, Pandas, NumPy, Scikit-Learn, Beautiful Soup, Data Visualization*

github.com/haniyakonain/ecoayur | *ecoayur.vercel.app*

- Built a full stack recommendation app connecting a Flask REST backend to a React.js frontend for real time predictions, deployed on Vercel.

EDUCATION

B.Tech in Artificial Intelligence & Data Science | Shadan Women's College of Engineering and Technology, Khairatabad
CGPA: 8.07 | Sep 2022 to May 2026

ACHIEVEMENTS

- Top 15 of 642 teams, Datanyx Hackathon (Nov 2024) & Top 16 of 140 participants, Stanley Code-a-Thon (Dec 2024)
